# Gödel's incompleteness theorem

Two goals of Hilbert's program:

**Completeness** A proof that all true mathematical statements can be proved in the formalism of mathematics.

**Consistency** A proof that no contradiction can be obtained in the formalism of mathematics using only "finitistic" reasoning about finite mathematical objects.

# Gödel's incompleteness theorem

Two goals of Hilbert's program:

**Completeness** A proof that all true mathematical statements can be proved in the formalism of mathematics.

**Consistency** A proof that no contradiction can be obtained in the formalism of mathematics using only "finitistic" reasoning about finite mathematical objects.

## Theorem (Gödel-Rosser)

- (1) *Gödel-Rosser first incompleteness theorem (G1): If  $T$  is a recursively axiomatized consistent extension of  $\mathbf{PA}$ , then  $T$  is not complete.*
- (2) *Gödel's second incompleteness theorem (G2): If  $T$  is a recursively axiomatized consistent extension of  $\mathbf{PA}$ , then the consistency of  $T$  is not provable in  $T$ .*

# Provability and Truth

## Definition

1. **Prof** =  $\{\ulcorner \phi \urcorner : \phi \text{ is sentence and } \mathbf{PA} \vdash \phi\}$ .
2. **Truth** =  $\{\ulcorner \phi \urcorner : \phi \text{ is sentence and } \mathfrak{N} \models \phi\}$  where  $\mathfrak{N} = (\mathbb{N}, +, \cdot)$ .

Theorem (Tarski's theorem on undefinability of truth)

**Truth** is not definable in  $\mathfrak{N}$ .

# Provability and Truth

## Theorem (Tarski's theorem on undefinability of truth)

**Truth** is not definable in  $\mathfrak{N}$ .

<b>Truth</b>	<b>Prof</b>
not definable in $\mathfrak{N}$	definable in $\mathfrak{N}$
not arithmetic	recursive enumerable
not recursive	not recursive
not representable in <b>PA</b>	not representable in <b>PA</b>
productive	not productive

# Solovay's arithmetical completeness theorem

## Definition

*An arithmetic interpretation is a function that assigns to each formula of modal logic a sentence of the language of arithmetic.*

## Theorem (Solovay)

**Arithmetical completeness theorem for GL** *For any modal formula  $\phi$ ,  $\mathbf{GL} \vdash \phi$  iff for every arithmetic interpretation  $f$ ,  $\mathbf{PA} \vdash \phi^f$ .*

**Arithmetical completeness theorem for GLS** *For any modal formula  $\phi$ ,  $\mathbf{GLS} \vdash \phi$  iff for every arithmetic interpretation  $f$ ,  $\mathfrak{N} \models \phi^f$ .*

## Definition

- (1) We say  $T$  is  $\Sigma_n$ -definable iff there is a  $\Sigma_n$  formula  $\alpha(x)$  such that  $\{n \in \omega : \mathfrak{N} \models \alpha(\bar{n})\} = \{\ulcorner \phi \urcorner : \phi \in T\}$ .
  - (2) We say  $T$  is  $\Sigma_n$ -sound if and only if for all  $\Sigma_n$  sentences  $\phi$ , if  $T \vdash \phi$ , then  $\mathfrak{N} \models \phi$ .
- ▶ Gödel's incompleteness theorem hold for  $\Sigma_1$ -definable theories containing **PA**.
  - ▶ We generalize Gödel's incompleteness theorem for arithmetically definable theories.

## Definition

- (1) We say  $T$  is  $\Sigma_n$ -definable iff there is a  $\Sigma_n$  formula  $\alpha(x)$  such that  $\{n \in \omega : \mathfrak{N} \models \alpha(\bar{n})\} = \{\ulcorner \phi \urcorner : \phi \in T\}$ .
  - (2) We say  $T$  is  $\Sigma_n$ -sound if and only if for all  $\Sigma_n$  sentences  $\phi$ , if  $T \vdash \phi$ , then  $\mathfrak{N} \models \phi$ .
- ▶ Gödel's incompleteness theorem hold for  $\Sigma_1$ -definable theories containing **PA**.
  - ▶ We generalize Gödel's incompleteness theorem for arithmetically definable theories.

## Theorem (Kikuchi, Kurahashi, 2017)

- (1) Every  $\Sigma_{n+1}$ -definable  $\Sigma_n$ -sound theory is incomplete.
- (2) Every consistent theory having  $\Pi_{n+1}$  set of theorems has a true but unprovable  $\Pi_n$  sentence.
- (3) Any  $\Sigma_{n+1}$ -definable  $\Sigma_n$ -sound theory can not prove its own  $\Sigma_n$ -soundness.

# Different proofs of incompleteness theorem

- ▶ Constructive proof: directly construct the independence sentence
- ▶ Proof via diagonalization lemma
- ▶ Proof via logical paradox
- ▶ Proof via recursion theory
- ▶ Proof via model theory

# Different proofs of incompleteness theorem

## Question

*Could we give a self-reference-free proof of Gödel's incompleteness theorem?*

# Incompleteness theorem and logical paradox

Incompleteness for  
higher order  
arithmetic and the  
limit of  
incompleteness

Yong Cheng

- ▶ Incompleteness is closely related to paradox.
- ▶ “Any epistemological antinomy could be used for a similar proof of the existence of undecidable propositions” —Gödel

# Incompleteness theorem and logical paradox

- ▶ Incompleteness is closely related to paradox.
- ▶ “Any epistemological antinomy could be used for a similar proof of the existence of undecidable propositions” —Gödel

Different proofs of incompleteness theorem via paradox:

Gödel Liar Paradox

Boolos Berry's paradox

Kurahashi Yablo's Paradox

Kritchman Unexpected Examination Paradox

Cieśliński Grelling's paradox

# Numeration and provability predicate

## Definition

Let  $T$  be any recursively axiomatized consistent extension of **PA** and  $\alpha(x)$  be a formula in the same language.

1.  $\alpha(x)$  is a numeration of  $T$  if for any  $n$ , **PA**  $\vdash \alpha(\bar{n})$  iff  $n$  is the Gödel number of some axiom of  $T$ .
2. Let  $\alpha(x)$  be a numeration of  $T$ . Define the formula  $\mathbf{Prf}_\alpha(x, y)$  saying “ $y$  is the Gödel number of a proof of the formula with Gödel number  $x$  from the set of all sentences satisfying  $\alpha(x)$ ”.
3. Define the provability predicate  $\mathbf{Pr}_\alpha(x)$  of  $\alpha(x)$  as  $\mathbf{Pr}_\alpha(x) \triangleq \exists y \mathbf{Prf}_\alpha(x, y)$  and consistency statement  $\mathbf{Con}_\alpha$  as  $\triangleq \neg \mathbf{Pr}_\alpha(\perp)$ .

# Drivability Conditions and **G2**

Let  $T$  be a recursively axiomatized consistent extension of **PA** and  $\alpha(x)$  be any  $\Sigma_1$  numeration of  $T$ . Then  $\mathbf{Pr}_\alpha(x)$  satisfies the following properties:

- D1** If  $T \vdash \varphi$ , then  $\mathbf{PA} \vdash \mathbf{Pr}_\alpha(\overline{\Gamma\varphi\overline{}})$ ;
- D2** If  $\varphi$  is  $\Sigma_1$  sentence, then  $\mathbf{PA} \vdash \varphi \rightarrow \mathbf{Pr}_\alpha(\overline{\Gamma\varphi\overline{}})$ ;
- D3**  $\mathbf{PA} \vdash \mathbf{Pr}_\alpha(\overline{\Gamma\varphi\overline{}}) \rightarrow (\mathbf{Pr}_\alpha(\overline{\Gamma\varphi \rightarrow \psi\overline{}}) \rightarrow \mathbf{Pr}_\alpha(\overline{\Gamma\psi\overline{}}))$ .

## Drivability Conditions and **G2**

Let  $T$  be a recursively axiomatized consistent extension of **PA** and  $\alpha(x)$  be any  $\Sigma_1$  numeration of  $T$ . Then  $\mathbf{Pr}_\alpha(x)$  satisfies the following properties:

- D1** If  $T \vdash \varphi$ , then  $\mathbf{PA} \vdash \mathbf{Pr}_\alpha(\overline{\Gamma\varphi\overline{}})$ ;
- D2** If  $\varphi$  is  $\Sigma_1$  sentence, then  $\mathbf{PA} \vdash \varphi \rightarrow \mathbf{Pr}_\alpha(\overline{\Gamma\varphi\overline{}})$ ;
- D3**  $\mathbf{PA} \vdash \mathbf{Pr}_\alpha(\overline{\Gamma\varphi\overline{}}) \rightarrow (\mathbf{Pr}_\alpha(\overline{\Gamma\varphi \rightarrow \psi\overline{}}) \rightarrow \mathbf{Pr}_\alpha(\overline{\Gamma\psi\overline{}}))$ .

### Theorem (**G2**, Gödel)

*Let  $T$  be any recursively axiomatized consistent extension of **PA**. If  $\alpha(x)$  is any  $\Sigma_1$  numeration of  $T$ , then  $T \not\vdash \mathbf{Con}_\alpha$ .*

# The intensionality of **G2** for **PA**

The intensional problem of **G2** Whether **G2** holds for **PA**  
depends on the numeration of **PA**.

Theorem (Feferman)

*There exists a  $\Pi_1$  numeration  $\pi(x)$  of **PA** such that **G2** fails:  
**PA**  $\vdash$  **Con** $_{\pi}$ .*

# The intensionality of **G2** for **PA**

The intensional problem of **G2** Whether **G2** holds for **PA** depends on the numeration of **PA**.

## Theorem (Feferman)

There exists a  $\Pi_1$  numeration  $\pi(x)$  of **PA** such that **G2** fails:  
**PA**  $\vdash$  **Con** $_{\pi}$ .

- ▶ Whether **G2** holds for **PA** depends on the numeration of **PA**.
- ▶ **D1-D3** are the sufficient condition but not the necessary condition to show that **G2** holds for **PA**.
- ▶ There exists a  $\Sigma_2$  numeration  $\alpha(x)$  of **PA** such that **D2** does not hold for **Pr** $_{\alpha}(x)$  but **G2** holds for **PA**.

# Incompleteness and provability logic

Let  $T$  be any recursively axiomatized consistent extension of **PA** and  $\alpha(x)$  be a numeration of  $T$ . The provability logic  $\mathbf{PL}_\alpha(T)$  is the set of all modal principles which are verifiable in  $T$  when the modal operator  $\Box$  is interpreted as  $\mathbf{Pr}_\alpha(x)$ .

# Incompleteness and provability logic

Let  $T$  be any recursively axiomatized consistent extension of **PA** and  $\alpha(x)$  be a numeration of  $T$ . The provability logic  $\mathbf{PL}_\alpha(T)$  is the set of all modal principles which are verifiable in  $T$  when the modal operator  $\Box$  is interpreted as  $\mathbf{Pr}_\alpha(x)$ .

## Theorem (Solovay's arithmetical completeness theorem)

*Let  $T$  be any recursively axiomatized consistent extension of **PA**. If  $T$  is  $\Sigma_1$ -sound, then for any  $\Sigma_1$  numeration  $\alpha(x)$  of  $T$ , the provability logic  $\mathbf{PL}_\alpha(T)$  is precisely **GL**.*

# Classification of provability logic under numeration

- ▶ The provability logic  $\mathbf{PL}_\tau(T)$  of a  $\Sigma_n$  numeration  $\tau(x)$  of  $T$  is a normal modal logic.
- ▶ We could classify provability logic according to the numeration of  $T$ .

# Classification of provability logic under numeration

- ▶ The provability logic  $\mathbf{PL}_\tau(T)$  of a  $\Sigma_n$  numeration  $\tau(x)$  of  $T$  is a normal modal logic.
- ▶ We could classify provability logic according to the numeration of  $T$ .

## Question

*Which normal modal logic is a provability logic  $\mathbf{PL}_\tau(T)$  of some  $\Sigma_n$  numeration  $\tau(x)$  of  $T$ ?*

# Classification of provability logic under numeration

- ▶ The provability logic  $\mathbf{PL}_\tau(T)$  of a  $\Sigma_n$  numeration  $\tau(x)$  of  $T$  is a normal modal logic.
- ▶ We could classify provability logic according to the numeration of  $T$ .

## Question

Which normal modal logic is a provability logic  $\mathbf{PL}_\tau(T)$  of some  $\Sigma_n$  numeration  $\tau(x)$  of  $T$ ?

## Theorem (Kurahashi, 2018)

1. For any recursively axiomatized consistent extension  $T$  of  $\mathbf{PA}$ , there exists a  $\Sigma_2$  numeration  $\alpha(x)$  of  $T$  such that the provability logic  $\mathbf{PL}_\alpha(T)$  is  $\mathbf{K}$ .
2. For each  $n \geq 2$ , there exists a  $\Sigma_2$  numeration  $\tau(x)$  of  $T$  such that the provability logic  $\mathbf{PL}_\tau(T)$  coincides with modal logic  $\mathbf{K} + \Box(\Box^n p \rightarrow p) \rightarrow \Box p$ .

## Part Two: Understanding incompleteness

**Motivation** Understanding incompleteness: Exploring the relationship between incompleteness, self-reference, provability logic, logical paradox and formal theory of truth

In this talk, I focus on the following two questions about incompleteness:

**Motivation** Understanding incompleteness: Exploring the relationship between incompleteness, self-reference, provability logic, logical paradox and formal theory of truth

In this talk, I focus on the following two questions about incompleteness:

1. Incompleteness for high order arithmetic

**Motivation** Understanding incompleteness: Exploring the relationship between incompleteness, self-reference, provability logic, logical paradox and formal theory of truth

In this talk, I focus on the following two questions about incompleteness:

1. Incompleteness for high order arithmetic
2. The limit of Incompleteness for subsystems of **PA**

# Mathematical examples of **G1** for **PA**

Incompleteness for  
higher order  
arithmetic and the  
limit of  
incompleteness

Yong Cheng

Gödel's proof of **G1** uses meta-mathematics and the independent sentence Gödel constructed (Gödel's sentence) is of meta-mathematical nature and has no real mathematical content.

# Mathematical examples of **G1** for **PA**

Incompleteness for  
higher order  
arithmetic and the  
limit of  
incompleteness

Yong Cheng

Gödel's proof of **G1** uses meta-mathematics and the independent sentence Gödel constructed (Gödel's sentence) is of meta-mathematical nature and has no real mathematical content.

## Question

*Could we find a sentence about arithmetic with interesting mathematical contents which is independent of **PA**?*

# Mathematical examples of **G1** for **PA**

Gödel's proof of **G1** uses meta-mathematics and the independent sentence Gödel constructed (Gödel's sentence) is of meta-mathematical nature and has no real mathematical content.

## Question

*Could we find a sentence about arithmetic with interesting mathematical contents which is independent of **PA**?*

## Theorem (Paris-Harrington)

*If **PA** is consistent, then there exists a sentence  $\phi$  of combinatorial contents such that  $\mathfrak{N} \models \phi$ , but  $\phi$  is independent of **PA**.*

# Incompleteness for high order arithmetic

## Definition

*Definition of higher order arithmetic:*

- (1)  $Z_2 = ZFC^- + \text{Every set is countable.}^1$
- (2)  $Z_3 = ZFC^- + \mathcal{P}(\omega) \text{ exists} + \text{Every set is of cardinality } \leq \aleph_1.$
- (3)  $Z_4 = ZFC^- + \mathcal{P}(\mathcal{P}(\omega)) \text{ exists} + \text{Every set is of cardinality } \leq \aleph_2.$

## Corollary

*If  $Z_2$  is consistent, then there is a true sentence about analysis which is not provable in  $Z_2$ .*

---

<sup>1</sup> $ZFC^-$  denotes ZFC with the Power Set Axiom deleted and Collection instead of Replacement.

## Fact

*Many classic mathematical theorems about analysis which are expressible in  $Z_2$  are provable in  $Z_2$ .*

## Fact

*Many classic mathematical theorems about analysis which are expressible in  $Z_2$  are provable in  $Z_2$ .*

## Question

Relativized Hilbert's program to  $Z_2$  Is  $Z_2$  complete for classic mathematical theorems expressible in  $Z_2$ ?

## Fact

*Many classic mathematical theorems about analysis which are expressible in  $Z_2$  are provable in  $Z_2$ .*

## Question

Relativized Hilbert's program to  $Z_2$  *Is  $Z_2$  complete for classic mathematical theorems expressible in  $Z_2$ ?*

**Motivation** Finding a counterexample for this question which is expressible in  $Z_2$  but not provable in  $Z_2$ .

# Harrington's Theorem

Harrington's theorem  $Det(\Sigma_1^1)$  implies  $0^\sharp$  exists.

## Definition

We let *Harrington's Principle*, HP for short, denote the following statement:  $\exists x \in 2^\omega \forall \alpha (\alpha \text{ is countable } x\text{-admissible} \rightarrow \alpha \text{ is an } L\text{-cardinal})$ .

# Harrington's Theorem

Harrington's theorem  $Det(\Sigma_1^1)$  implies  $0^\sharp$  exists.

## Definition

We let *Harrington's Principle*, HP for short, denote the following statement:  $\exists x \in 2^\omega \forall \alpha (\alpha \text{ is countable } x\text{-admissible} \rightarrow \alpha \text{ is an } L\text{-cardinal})$ .

Harrington's proof of " $Det(\Sigma_1^1)$  implies  $0^\sharp$  exists" in ZF is done in two steps:

# Harrington's Theorem

Harrington's theorem  $Det(\Sigma_1^1)$  implies  $0^\sharp$  exists.

## Definition

We let *Harrington's Principle*, HP for short, denote the following statement:  $\exists x \in 2^\omega \forall \alpha (\alpha \text{ is countable } x\text{-admissible} \rightarrow \alpha \text{ is an } L\text{-cardinal})$ .

Harrington's proof of " $Det(\Sigma_1^1)$  implies  $0^\sharp$  exists" in ZF is done in two steps:

**First Step**  $Det(\Sigma_1^1)$  implies HP;

# Harrington's Theorem

Harrington's theorem  $Det(\Sigma_1^1)$  implies  $0^\sharp$  exists.

## Definition

We let *Harrington's Principle*, HP for short, denote the following statement:  $\exists x \in 2^\omega \forall \alpha (\alpha \text{ is countable } x\text{-admissible} \rightarrow \alpha \text{ is an } L\text{-cardinal})$ .

Harrington's proof of " $Det(\Sigma_1^1)$  implies  $0^\sharp$  exists" in ZF is done in two steps:

**First Step**  $Det(\Sigma_1^1)$  implies HP;

**Second Step** HP implies  $0^\sharp$  exists.

# Harrington's Theorem

Harrington's theorem  $Det(\Sigma_1^1)$  implies  $0^\sharp$  exists.

## Definition

We let *Harrington's Principle*, HP for short, denote the following statement:  $\exists x \in 2^\omega \forall \alpha (\alpha \text{ is countable } x\text{-admissible} \rightarrow \alpha \text{ is an } L\text{-cardinal})$ .

Harrington's proof of " $Det(\Sigma_1^1)$  implies  $0^\sharp$  exists" in ZF is done in two steps:

**First Step**  $Det(\Sigma_1^1)$  implies HP;

**Second Step** HP implies  $0^\sharp$  exists.

In ZF we have

$$Det(\Sigma_1^1) \Leftrightarrow \text{HP} \Leftrightarrow 0^\sharp \text{ exists.}$$

# The counterexample

- ▶ The first step “ $Det(\Sigma_1^1)$  implies HP” is provable in  $Z_2$ .

# The counterexample

- ▶ The first step “ $Det(\Sigma_1^1)$  implies HP” is provable in  $Z_2$ .

## Question

*Is “HP implies  $0^\sharp$  exists” provable in  $Z_2$ ?*

# The counterexample

- ▶ The first step “ $Det(\Sigma_1^1)$  implies HP” is provable in  $Z_2$ .

## Question

*Is “HP implies  $0^\sharp$  exists” provable in  $Z_2$ ?*

The counterexample I find is the sentence: “HP implies  $0^\sharp$  exists”:

# The counterexample

- ▶ The first step “ $Det(\Sigma_1^1)$  implies HP” is provable in  $Z_2$ .

## Question

*Is “HP implies  $0^\sharp$  exists” provable in  $Z_2$ ?*

The counterexample I find is the sentence: “HP implies  $0^\sharp$  exists”:

## Theorem

- (1) *“HP implies  $0^\sharp$  exists” is not provable in  $Z_2$ .*
- (2) *“HP implies  $0^\sharp$  exists” is not provable in  $Z_3$ .*
- (3) *“HP implies  $0^\sharp$  exists” is provable in  $Z_4$ .*

*So  $Z_4$  is the minimal system in higher order arithmetic to show that “HP implies  $0^\sharp$  exists”.*

# Summary of results

Incompleteness for  
higher order  
arithmetic and the  
limit of  
incompleteness

Yong Cheng

# Summary of results

- ▶ We find an interesting classic mathematical theorem from set theory which is expressible in  $Z_2$  but not provable in  $Z_2$ : “HP implies  $0^\sharp$  exists”.

# Summary of results

- ▶ We find an interesting classic mathematical theorem from set theory which is expressible in  $Z_2$  but not provable in  $Z_2$ : “HP implies  $0^\sharp$  exists”.
- ▶ “HP implies  $0^\sharp$  exists” is also not provable in  $Z_3$ .

# Summary of results

- ▶ We find an interesting classic mathematical theorem from set theory which is expressible in  $Z_2$  but not provable in  $Z_2$ : “HP implies  $0^\sharp$  exists” .
- ▶ “HP implies  $0^\sharp$  exists” is also not provable in  $Z_3$ .
- ▶ But, in  $Z_4$ , HP is equivalent to  $0^\sharp$  exists.

# Summary of results

- ▶ We find an interesting classic mathematical theorem from set theory which is expressible in  $Z_2$  but not provable in  $Z_2$ : “HP implies  $0^\sharp$  exists” .
- ▶ “HP implies  $0^\sharp$  exists” is also not provable in  $Z_3$ .
- ▶ But, in  $Z_4$ , HP is equivalent to  $0^\sharp$  exists.
- ▶ Hence,  $Z_4$  is the minimal system in higher order arithmetic to show that HP implies  $0^\sharp$  exists.

## Summary of results

- ▶ We find an interesting classic mathematical theorem from set theory which is expressible in  $Z_2$  but not provable in  $Z_2$ : “HP implies  $0^\sharp$  exists”.
- ▶ “HP implies  $0^\sharp$  exists” is also not provable in  $Z_3$ .
- ▶ But, in  $Z_4$ , HP is equivalent to  $0^\sharp$  exists.
- ▶ Hence,  $Z_4$  is the minimal system in higher order arithmetic to show that HP implies  $0^\sharp$  exists.

### Theorem (joint work with Ralf Schindler)

1.  $Z_2 + \text{HP}$  is equiconsistent with ZFC.
2.  $Z_3 + \text{HP}$  is equiconsistent with ZFC + there exists a remarkable cardinal.

# Finding the limit of Incompleteness for subsystems of **PA**

**Question** Exactly how much information of **PA** is needed for the proof of **G1** and **G2**?

**Goal** Finding the limit of Incompleteness for subsystems of **PA**.

- ▶ An interpretation of a theory  $T$  in a theory  $S$  is a mapping from formulas of  $T$  to formulas of  $S$  that maps all axioms of  $T$  to sentences provable in  $S$ .
- ▶ Let  $Int(S)$  denote the degree of interpretation of theory  $S$ .  $Int(T) < Int(S)$  means that  $T$  is interpretable in  $S$  but  $S$  is not interpretable in  $T$ .  $Int(T) = Int(S)$  means that  $T$  and  $S$  are mutually interpretable.
- ▶ Interpretability can be accepted as a measure of strength of first order theory.

## Definition

Let  $T$  be a recursively axiomatizable consistent theory.

1. **G1** holds for  $T$  iff for any recursively axiomatizable consistent theory  $S$ , if  $T$  is interpretable in  $S$ , then  $S$  is undecidable.
2.  $T$  is essentially undecidable iff any recursively axiomatizable consistent extension of  $T$  is undecidable.
3.  $T$  is essentially incomplete iff any recursively axiomatizable consistent extension of  $T$  is incomplete.

## Proposition

Let  $T$  be a recursively axiomatizable consistent theory. The followings are equivalent:

1. **G1** holds for  $T$ .
2.  $T$  is essentially undecidable.
3.  $T$  is essentially incomplete.

## Question

Could we find a theory  $S$  with minimal degree of interpretation such that **G1** holds for  $S$ ?

## Definition

Let Robinson's **Q** be the system consisting of the following sentences:

1.  $\forall x \forall y (\mathbf{S}x = \mathbf{S}y \rightarrow x = y)$ ;
2.  $\forall x (\mathbf{S}x \neq \mathbf{0})$ ;
3.  $\forall x (x \neq \mathbf{0} \rightarrow \exists y x = \mathbf{S}y)$ ;
4.  $\forall x \forall y (x + \mathbf{0} = x)$ ;
5.  $\forall x \forall y (x + \mathbf{S}y = \mathbf{S}(x + y))$ ;
6.  $\forall x (x \cdot \mathbf{0} = \mathbf{0})$ ;
7.  $\forall x \forall y (x \cdot \mathbf{S}y = x \cdot y + x)$ .

## System $\mathbf{R}$

We work on  $L(\bar{0}, \dots, \bar{n}, \dots, +, \cdot, \leq)$  with infinitely many constants as names for natural numbers and with  $\leq$  as primitive symbol.

### Definition

Let  $\mathbf{R}$  be the system consisting of schemes Ax1-Ax5 where  $m, n \in \mathbb{N}$ .

$$\text{Ax1 } \bar{m} + \bar{n} = \overline{m + n};$$

$$\text{Ax2 } \bar{m} \neq \bar{n} \text{ if } m \neq n;$$

$$\text{Ax3 } \bar{m} \cdot \bar{n} = \overline{m \cdot n};$$

$$\text{Ax4 } \forall x(x \leq \bar{n} \rightarrow x = \bar{0} \vee \dots \vee x = \bar{n});$$

$$\text{Ax5 } \forall x(x \leq \bar{n} \vee \bar{n} \leq x).$$

### Theorem

(Albert Visser) Suppose  $T$  is an R.E. theory. Then  $T$  is locally finite (any finite sub-theory of  $T$  has a finite model) iff  $T$  is interpretable in  $\mathbf{R}$ .

# Properties of $\mathbf{Q}$ and $\mathbf{R}$

1.  $\mathbf{R}$  is a sub-theory of  $\mathbf{Q}$ ;  $\mathbf{Q}$  is finitely axiomatizable but  $\mathbf{R}$  is not.
2.  $\mathbf{Q}$  is minimal essentially undecidable;  $\mathbf{R}$  is not minimal essentially undecidable.
3.  $Int(\mathbf{R}) < Int(\mathbf{Q})$  since  $\mathbf{Q}$  is not interpretable in  $\mathbf{R}$ .

# Properties of $\mathbf{Q}$ and $\mathbf{R}$

1.  $\mathbf{R}$  is a sub-theory of  $\mathbf{Q}$ ;  $\mathbf{Q}$  is finitely axiomatizable but  $\mathbf{R}$  is not.
2.  $\mathbf{Q}$  is minimal essentially undecidable;  $\mathbf{R}$  is not minimal essentially undecidable.
3.  $Int(\mathbf{R}) < Int(\mathbf{Q})$  since  $\mathbf{Q}$  is not interpretable in  $\mathbf{R}$ .

## Theorem (Folklore)

**G1** holds for  $\mathbf{R}$ .

# Properties of $\mathbf{Q}$ and $\mathbf{R}$

1.  $\mathbf{R}$  is a sub-theory of  $\mathbf{Q}$ ;  $\mathbf{Q}$  is finitely axiomatizable but  $\mathbf{R}$  is not.
2.  $\mathbf{Q}$  is minimal essentially undecidable;  $\mathbf{R}$  is not minimal essentially undecidable.
3.  $Int(\mathbf{R}) < Int(\mathbf{Q})$  since  $\mathbf{Q}$  is not interpretable in  $\mathbf{R}$ .

## Theorem (Folklore)

**G1** holds for  $\mathbf{R}$ .

## Question

Could we find a theory  $S$  such that **G1** holds for  $S$  and  $Int(S) < Int(\mathbf{R})$ ?

# System $\bar{\mathbf{R}}$

## Definition

Let  $\bar{\mathbf{R}}$  be the system consisting of schemes  $\Omega_2, \Omega_3, \Omega'_4$  where  $m, n \in \mathbb{N}$ .

$$\text{Ax2 } \bar{m} \neq \bar{n} \text{ if } m \neq n;$$

$$\text{Ax3 } \bar{m} \cdot \bar{n} = \overline{m \cdot n};$$

$$\text{Ax}' \forall x (x \leq \bar{n} \leftrightarrow x = \bar{0} \vee \dots \vee x = \bar{n}).$$

# System $\bar{\mathbf{R}}$

## Definition

Let  $\bar{\mathbf{R}}$  be the system consisting of schemes  $\Omega_2, \Omega_3, \Omega'_4$  where  $m, n \in \mathbb{N}$ .

$$\text{Ax2 } \bar{m} \neq \bar{n} \text{ if } m \neq n;$$

$$\text{Ax3 } \bar{m} \cdot \bar{n} = \overline{m \cdot n};$$

$$\text{Ax}' \forall x (x \leq \bar{n} \leftrightarrow x = \bar{0} \vee \dots \vee x = \bar{n}).$$

$\bar{\mathbf{R}}$  is minimal essentially undecidable: if deleting any axiom of  $\bar{\mathbf{R}}$ , then the remaining sub-theory is not essentially undecidable.

# System $\bar{\mathbf{R}}$

## Definition

Let  $\bar{\mathbf{R}}$  be the system consisting of schemes  $\Omega_2, \Omega_3, \Omega'_4$  where  $m, n \in \mathbb{N}$ .

$$\text{Ax2 } \bar{m} \neq \bar{n} \text{ if } m \neq n;$$

$$\text{Ax3 } \bar{m} \cdot \bar{n} = \overline{m \cdot n};$$

$$\text{Ax}' \forall x (x \leq \bar{n} \leftrightarrow x = \bar{0} \vee \dots \vee x = \bar{n}).$$

$\bar{\mathbf{R}}$  is minimal essentially undecidable: if deleting any axiom of  $\bar{\mathbf{R}}$ , then the remaining sub-theory is not essentially undecidable.

## Theorem

- (1) **G1** holds for  $\bar{\mathbf{R}}$ .
- (2)  $\mathbf{R}$  is interpretable in  $\bar{\mathbf{R}}$ , and hence  $\text{Int}(\bar{\mathbf{R}}) = \text{Int}(\mathbf{R})$ .

## Definition

$\langle S, T \rangle$  is a recursively inseparable pair if  $S, T \subseteq \mathbb{N}$  both are recursively enumerable and there is no recursive set  $X \subseteq \mathbb{N}$  such that  $S \subseteq X$  and  $X \cap T = \emptyset$ .

## Definition

$\langle S, T \rangle$  is a recursively inseparable pair if  $S, T \subseteq \mathbb{N}$  both are recursively enumerable and there is no recursive set  $X \subseteq \mathbb{N}$  such that  $S \subseteq X$  and  $X \cap T = \emptyset$ .

## Theorem

For any recursively inseparable pair  $\langle S, T \rangle$ , there exists theory  $U_{\langle S, T \rangle}$  such that **G1** holds for  $U_{\langle S, T \rangle}$  and  $\text{Int}(U_{\langle S, T \rangle}) < \text{Int}(\mathbf{R})$ .

## Definition

$\langle S, T \rangle$  is a recursively inseparable pair if  $S, T \subseteq \mathbb{N}$  both are recursively enumerable and there is no recursive set  $X \subseteq \mathbb{N}$  such that  $S \subseteq X$  and  $X \cap T = \emptyset$ .

## Theorem

For any recursively inseparable pair  $\langle S, T \rangle$ , there exists theory  $U_{\langle S, T \rangle}$  such that **G1** holds for  $U_{\langle S, T \rangle}$  and  $\text{Int}(U_{\langle S, T \rangle}) < \text{Int}(\mathbf{R})$ .

## Definition

Let  $\langle S, T \rangle$  be a recursively inseparable pair. Let  $L$  be the finite language  $\{\mathbf{0}, \mathbf{S}, \mathbf{P}\}$ . Consider the following theory  $U_{\langle S, T \rangle}$ :

- ▶  $\bar{m} \neq \bar{n}$  if  $m \neq n$ ;
- ▶  $\mathbf{P}(\bar{n})$  if  $n \in S$ ;
- ▶  $\neg \mathbf{P}(\bar{n})$  if  $n \in T$ .

In the following, let  $\langle S, T \rangle$  be an arbitrary recursively inseparable pair.

In the following, let  $\langle S, T \rangle$  be an arbitrary recursively inseparable pair.

## Lemma

**G1** holds for  $U_{\langle S, T \rangle}$ .

In the following, let  $\langle S, T \rangle$  be an arbitrary recursively inseparable pair.

Lemma

**G1** holds for  $U_{\langle S, T \rangle}$ .

Lemma

$U_{\langle S, T \rangle}$  is interpretable in **R**.

In the following, let  $\langle S, T \rangle$  be an arbitrary recursively inseparable pair.

### Lemma

**G1** holds for  $U_{\langle S, T \rangle}$ .

### Lemma

$U_{\langle S, T \rangle}$  is interpretable in **R**.

### Theorem

**R** is not interpretable in  $U_{\langle S, T \rangle}$ .

In the following, let  $\langle S, T \rangle$  be an arbitrary recursively inseparable pair.

### Lemma

**G1** holds for  $U_{\langle S, T \rangle}$ .

### Lemma

$U_{\langle S, T \rangle}$  is interpretable in  $\mathbf{R}$ .

### Theorem

$\mathbf{R}$  is not interpretable in  $U_{\langle S, T \rangle}$ .

### Corollary

**G1** holds for  $U_{\langle S, T \rangle}$  and  $\text{Int}(U_{\langle S, T \rangle}) < \text{Int}(\mathbf{R})$ .

# Model completion of the empty theory

- (2) Models of  $EC_L$  are exactly the existentially closed  $L$ -structures; in particular, every  $L$ -structure embeds in a model of  $EC_L$ .

## Definition

Consider the following theory  $S$  in the language  $\langle \in \rangle$  axiomatized by the sentences

$\exists z, x_0, \dots, x_n (\bigwedge_{i < j < n} x_i \neq x_j \wedge \forall y (y \in z \leftrightarrow \bigvee_{i < n} y = x_i))$  for all  $n \in \omega$ .

## Proof of the main theorem

### Theorem (Emil Jeřábek)

*For any language  $L$  and formula  $\phi(\bar{z}, \bar{x}, \bar{y})$  with  $lh(\bar{x}) = lh(\bar{y})$ , there is a constant  $n$  with the following property. Let  $M \models EC_L$  and  $\bar{u} \in M$  be such that  $M \models \bar{x}_0, \dots, \bar{x}_{n-1} \bigwedge_{i < j < n} \phi(\bar{u}, \bar{x}_i, \bar{x}_j)$ . Then for every  $m \in \omega$  and an asymmetric relation  $R$  on  $\{0, \dots, m-1\}$ ,  $M \models \bar{x}_0, \dots, \bar{x}_{m-1} \bigwedge_{\langle s, t \rangle \in R} \phi(\bar{u}, \bar{x}_s, \bar{x}_t)$ .*

### Proof.

Emil's proof uses Ramsey's theory and indiscernibility argument. □
